Subject: SBA Tower alternative--Femtocells
Attachments: 016+Femtocells+Natural+Solution+for+Offload.pdf

Acton Planning:

The wireless infrastructure association PCIA has members promoting the concept of small stations—**femtocells--closing radio coverage gaps from the edge of the network** on in. For a non-recurring cost of \$100, individuals can establish a personal cell attached to the internet. This cell will serve wireless communications within its range. Femtocells and distributed antenna systems will be utilized in the future to close radio gaps and maintain continuity of personal wireless communications.

Tower build-out will be halted and even reversed.
